PRACTICAL NO 4

Problem Statement:

Implement all 20 grains using Pandas methods. The Sample Grains for the Sales Dataset are as:

Which was the best month for sales? How much was earned that month?

Which product sold the most? Why do you think it did?

Which city sold the most products?

What Products are most often sold together?

#CODE:

```
import pandas as pd
df=pd.read_csv('grainsales.csv')
print(df)
```
